

9th September 2019

DSEI 2019

UR Group Partnering EMCORE at DSEI 2019 - N5-320

“UR Group - World-class Connectivity and Fibre Navigation Systems for Defence”

EMCORE Corporation and UR Group are excited to welcome you to this year’s DSEI in London, from tomorrow 10th September through to the 13th. This marks our 7th consecutive DSEI joint participation in London’s Excel centre continuing to bring the latest innovations in global connectivity and advanced navigation systems.

This year, leveraging EMCORE’s acquisition of Systron Donner Inertial, we feature MEMS gyroscopes, Inertial Measurement Units (IMUs) and Inertial Navigation Systems (INS). This compliments the advanced Fibre-optic Gyroscopes, Fibre-optic IMUs & INS from EMCORE Corporation.

Our booth, located in the North hall **N5-320**, will also feature EM Solutions latest beam steerable KA Band flat-panel satellite antenna.

We are excited to invite all of our partners to meet with us at the event and look forward to another successful show demonstrating our integrated support services throughout Europe and our continued commitment to the defence sector.
